Attaching the collection here for convenience, but your best reference is the slides we signaled to you (emails earlier today). Note, I think the attached file that says OTAQ might be R2 (quickly added). -A

Hi Andrew:

Yes, I would like to look at the comments. Should I search under emails from you?

Very busy period.. my last couple of months here.

— Ravi.

Hi Ravi,

I hope that everything is going well and that you are not too busy with the appropriations work (although I assume you are swamped).

You will see that we added you to a slide deck we developed for the Agency review meeting last week and are using to make updates to the draft in advance of Interagency review (hoping to be ready for IAR around November 11th if preparations and briefings, etc. go well). The main comments I wanted to bring to your attention have to do with the potential quantitative impact of endogenous formaldehyde levels on our noncancer and cancer toxicity values (basically, adding a few more explicit statements about this uncertainty).

We're hoping that you have some time to take a look or maybe just have a chat over the next few weeks (the more detailed comments should also have been shared with you, if you need them)?

Thanks and take care,
Barbara and Andrew
